Application 10/526,262

Amendment filed 12/1/06

Office Action 11/3/06

5 Amendments to the Specification:

Please delete the paragraph beginning on line 19 of page 9 and replace with the following:

- 10 More specifically, the frustoconical surface 66 of the distributor plunger 28 progressively widens toward the rear and its movement toward the front between the branches or the kinks 64 of the stirrup 58 has the effect of moving these two branches or these two kinks
- 15 away from one another and of pushing away the aforementioned kinks or branches 62 radially outward out of the annular slot in the sleeve 46 in which they were engaged. Under the action of the spring 22 52, the sleeve 46 is then moved toward the rear in a sealed
- 20 manner in the housing 48 of the piston 22 and its rear rim 54 is applied with sealing against the annular shutter 56 of the three-way valve 30 and pushes this valve away toward the rear, against the action of the return spring 68 for this shutter.
